

Electronic Resources and Information Literacy in Higher Education Library

Authors : Nirmal Singh, Rajesh Kumar

Abstract : Abstract- Information literacy aims to develop both critical understanding and active participation in scholars. It enables scholars to interpret and make informed judgments as users of information sources, and it also enables them to become producers of information in their own right, and thereby to become more powerful participants in society. Information literacy is about developing people's critical and creative abilities. Digital media - and particularly the Internet - significantly increase the potential for such active participation of the individual, provided scholars have the means and training to effectively access and use them. This paper provides definition, standards and importance of information literacy (IL).
