

In vitro Culture of Flowers of Maerua crassifolia

Authors : Abobkar Abraham Mohamed Saad, Asma Abud Alsalam

Abstract : Closed flowers of *Maerua crassifolia* were cultured on Murashige and Skoog medium supplemented with benzyl amino purine BA (1.0 mg/l). The colour of flowers changed from green to pale brown after one week. They opened after two weeks. The anthers became clear which was observed after 3 weeks. Calluses are induced from sepals after one month. 19 anthers were observed with average length of 1.9 cm. The amount of calluses increased after 40 days. These calluses were fragmented and subcultured on MS+ 2-4D (1.0 mg/l) in order to increase growth.

Keywords : in vitro, Maerua, flowers, culture

Conference Title : ICB 2014 : International Conference on Biology

Conference Location : Istanbul, Türkiye

Conference Dates : June 19-20, 2014
