

The Research Report of Employment Trends in Printing Industry for Prepress

Weera Chotithammaporn

Abstract—This research aims to study employment trends in printing industry for prepress support by Suan Sunandha University Fund. The objectives of this research are to explain the trends of the employment in Thai Printing Industry for prepress in Bangkok and the description of different personnel that prepress entrepreneur need and also the problems of employment.

The population of prepress entrepreneurs is about 100 organizations in the area of Bangkok. The questionnaires has been taken and analyzed with SPSS program by using the average percentage and standard deviation.

This research is multiple case studies. The conceptual framework is developed on the basis of the open systems theory.

The research result show that

1. The most of prepress entrepreneur have trend to choose the employee by any sex, the age 25-29 years old, bachelor degree and have 1-2 years experience.
2. The most problems are the understanding in job, communication/relation and the understanding in new technology.
3. The trends aims to employment in 1-3 years have 57.8% for prepress industry in Bangkok.

This research suggests that:

1. Thai printing industry for prepress in Bangkok need quality employee that expert in printing technology.
2. Prepress entrepreneur should have agreement to development with university for practice the employee.
3. Prepress entrepreneur should support personal to fulfill the knowledge.

Keywords—Printing Industry, Prepress.

I. INTRODUCTION

THE production processes in the publishing industry are divided into three stages [1]: stage before printing (prepress) process printing (press) and after printing (post press), which all three phases are the processes for the production of publications of all types, whether would be printed with any system. Prepress is the first step of the publication process. Starting from the original copies and perform the steps to process the plate and then ready to brings up the print publications - this steps are involved with the performance of technologies such as the computer used for layout, design and making the plate. Therefore, better understanding must be developed to keep up with the advancement of technology. In prepress business of publishing in Thailand, characteristics are divided into two types:

Weera Chotithammaporn is with Printing Technology Department, Faculty of Industrial Technology, Suan Sunandha Rajabhat University, Bangkok, Thailand (Tel.66 2160 1470 ext.18 Facsimile 66 2160 1470 ext.11 e-mail: weera.ch@ssru.ac.th).

first type is Artwork Design and second type is Film, Color Dividing and Making Plate.

This research can help to behold the entrepreneurs in the prepress publishing industry's employment's trends, including personal qualifications. This will allow the institution or training center of prepress publishing design instruction make plans for students in order to comply with the needs of the prepress publishing business. This will allow the production to have even more effectively staff. It is also avoiding the waste of education and can be applied to actual practice.

II. RESEARCH OBJECTIVES

1. To study the trend of employment in printing industry for prepress.
2. To study the characteristics of the personnel in printing industry for prepress in the establishment/business.

III. RESEARCH SCOPE

This research studies only about the establishment prepress publishing industry in Bangkok, by using a database establishment from the industry publications published by Printing Association Thailand.

A. Population and Representative Sample

1. Population referred to 100 organizations of prepress entrepreneurs in Bangkok [2].
2. Representative referred to at least 80% of prepress entrepreneurs in Bangkok.

B. Variable of the Study

1. The independent variables' characteristics, including gender, age, education and the experience of the personnel.

Fig. 3 The Position Required In The Establishment

XI. CAPABILITY OF PERSONNEL TO ESTABLISHMENTS

In case of capability, researcher found that Prepress Printing Establishments mainly required employees that possessed the knowledge of MAC & PC for 28 positions. Also, they needed Design and Computer to Plate for 8 workers, Photoshop & Illustrator, 6 positions and Image Setter for 6 positions.

Fig. 4 Capability of Personnel to Establishment

XII. ADDITIONAL COMPETENCE OF THE PERSONNEL AT THE ESTABLISHMENT

In aspect of additional competence, researcher found that 60% or 54 businesses establishments require employees with the abilities regarding to computer use. Also, English communication skills were needed in 13 places (14.44%). The interpretation of the color was needed in 8 places (8.89%). There were 15 companies or 16.67 % that provided no details in the area.

Fig. 5 Additional Competence of the Personnel at the Establishment

XIII. EMPLOYMENT ISSUES OF ESTABLISHMENT, MORE LIKELY TO FACE

1. Failure to understand the details of the job.
2. Unaware of new technology in the use of the Prepress Industry.
3. Lack of work experience.
4. Lack of good communication between colleagues.

XIV. RECOMMENDATIONS

1. The Printing Industry for Prepress Most requires qualified staff for employment. Therefore recruited from schools that teach the particular subjects in printing schools that send employees to workshops - to bring new technologies to improve their performance.
2. The companies should arrange with the school to apprenticeship the students studying in related fields to be trained and practiced using specialized equipment. And also be able to communicate for the purposes of the work performed to meet the needs of customers.
3. The companies should establish the support's staff to have further knowledge by coordinating with educational institutions for training period to introduce the employees with new technology and improve the skills.

XV. CONCLUSION

The research results show that:

1. The most of prepress entrepreneurs have trend to choose the employee without considering of any gender, the age 25-29 years old, bachelor degree and with 1-2 years of experience.
2. The biggest problems are to understand during work: communication, relations and the understanding of new technology.
3. The trends aim to employment in 1-3 years - 57.8% for Prepress industry in Bangkok.

This research suggests that:

1. Thai Printing Industry for Prepress in Bangkok need quality employee that expert in printing technology.
2. Prepress entrepreneur should have agreement to develop with university for practice the employee.
3. Prepress entrepreneur should support personal to fulfill the knowledge.

Due to the results on employment trend in prepress area of printing industry, researcher found that the prepress firms required prospect employees with the following conditions. Firstly, there was no preference in gender but employees must have about 1-2 years of work experiences with at least vocational degree or bachelor's degree. Secondly, vacancy positions in recent years were artwork designers, MAC technicians with competency on MAC&PC plus technological knowledge on prepress, press, and postpress including ability in design complied with programs such as computer to plate, Photoshop, illustrator, Image Setter. Thirdly, besides capabilities are particularly required in printing areas. Employers in the business also demand prospect employees to have skill on computer, English, color reading in order to systematically understand root of problems and found solutions to technical obstacles in prepress business. In addition, there was a suggestion indicating that the relationship between printing industry and educational institutes should be established in order to create a network and create understanding environment among the stakeholders.

Researcher realized that this research was compatible with the work of Noppawan Wilawan [3] who found out that age and gender excluding educational background affected trend on employment. The results also complied with work of Chanin Wasrinont [4] regarding the fact that job experience was the important factor in possibility to be employed. Additionally, such outcomes were in accordance with Piya Najaras's work [5]: gender and age did not affect employment trend. Still, the results were not in the same way with Sophon Muneejinda's work [6] regarding garment sector which indicated that job experience was not the factor for employers to consider about employment. Anyway, the work also stated that the experiences increased the possibility of prospect employees to be hired.

ACKNOWLEDGMENT

This paper was successful due to co-operations of many people, both specialists and students. Researcher would like to thank for Assistant Professor Waree Kearddum and Lect. Thanakrit Kumhom who gave suggestions and approve qualities of this paper. Also, researcher appreciates the co-operation from prepress entrepreneurs in Bangkok which provided information regarding employment in prepress business. Last but not least, researcher would like to thank student from printing technology department for participation in collecting surveyed papers. The author would like to show deepest gratitude to Research Institute of Suan Sunandha Rajabhat University for giving us the opportunity and scholarship to do this research.
