

Student Researchers and Industry Partnerships Improve Health Management with Data Driven Decisions

Authors : Carole A. South-Winter

Abstract : Research-based learning gives students the opportunity to experience problems that require critical thinking and idea development. The skills they gain in working through these problems 'hands-on,' develop into attributes that benefit their careers in the professional field. The partnerships developed between students and industries give advantages to both sides. The students gain knowledge and skills that will increase their likelihood of success in the future and the industries are given research on new advancements that will give them a competitive advantage in their given field of work. The future of these partnerships is dependent on the success of current programs, enabling the enhancement and improvement of the research efforts. Once more students can complete research, there will be an increase in reliability of the results for each industry. The overall goal is to continue the support for research-based learning and the partnerships formed between students and industries.

Keywords : global healthcare, industry partnerships, research-driven decisions, short-term study abroad

Conference Title : ICHMWD 2019 : International Conference on Healthcare Management and Work Design

Conference Location : Venice, Italy

Conference Dates : April 11-12, 2019
