

Low-Temperature Luminescence Spectroscopy of Violet Sr-Al-O:Eu²⁺ Phosphor Particles

Authors : Keiji Komatsu, Hayato Maruyama, Ariyuki Kato, Atsushi Nakamura, Shigeo Ohshio, Hiroki Akasaka, Hidetoshi Saitoh

Abstract : Violet Sr-Al-O:Eu²⁺ phosphor particles were synthesized from a metal-ethylenediaminetetraacetic acid (EDTA) solution of Sr, Al, Eu, and particulate alumina via spray drying and sintering in a reducing atmosphere. The crystal structures and emission properties at 85-300 K were investigated. The composition of the violet Sr-Al-O:Eu²⁺ phosphor particles was determined from various Sr-Al-O:Eu²⁺ phosphors by their emission properties' dependence on temperature. The highly crystalline SrAl₁₂O₁₉:Eu²⁺ emission phases were confirmed by their crystallite sizes and the activation energies for the 4f⁵d-8s^{7/2} transition of the Eu²⁺ ion. These results showed that the material identification for the violet Sr-Al-O:Eu²⁺ phosphor was accomplished by the low-temperature luminescence measurements.

Keywords : low temperature luminescence spectroscopy, material identification, strontium aluminates phosphor, emission properties

Conference Title : ICMSME 2014 : International Conference on Materials Science and Mechanical Engineering

Conference Location : Bangkok, Thailand

Conference Dates : December 18-19, 2014
