

Comparison of Fundamental Frequency Model and PWM Based Model for UPFC

Authors : S. A. Al-Qallaf, S. A. Al-Mawsawi, A. Haider

Abstract : Among all FACTS devices, the unified power flow controller (UPFC) is considered to be the most versatile device. This is due to its capability to control all the transmission system parameters (impedance, voltage magnitude, and phase angle). With the growing interest in UPFC, the attention to develop a mathematical model has increased. Several models were introduced for UPFC in literature for different type of studies in power systems. In this paper a novel comparison study between two dynamic models of UPFC with their proposed control strategies.

Keywords : FACTS, UPFC, dynamic modeling, PWM, fundamental frequency

Conference Title : ICSRD 2020 : International Conference on Scientific Research and Development

Conference Location : Chicago, United States

Conference Dates : December 12-13, 2020
