

Finite Volume Method in Loop Network in Hydraulic Transient

Authors : Hossain Samani, Mohammad Ehteram

Abstract : In this paper, we consider finite volume method (FVM) in water hammer. We will simulate these techniques on a looped network with complex boundary conditions. After comparing methods, we see the FVM method as the best method. We compare the results of FVM with experimental data. Finite volume using staggered grid is applied for solving water hammer equations.

Keywords : hydraulic transient, water hammer, interpolation, non-linear interpolation

Conference Title : ICCGE 2014 : International Conference on Civil and Geological Engineering

Conference Location : London, United Kingdom

Conference Dates : July 27-28, 2014
