

Epidemiology and Jeopardy Aspect of Febrile Neutropenia Patients by Means of Infectious Maladies

Authors : Pouya Karimi, Ramin Ghasemi Shayan

Abstract : Conclusions of the sort and setting of observational treatment for immunocompromised patients with fever are confused by the qualities of the hidden disease and the impacts of medications previously got, just as by changing microbiological examples and patterns in sedate obstruction at national and institutional levels. A few frameworks have been proposed to recognize patients who could profit by outpatient anti-infection treatment from patients who require hospitalization. Useful contemplations may choose whether the fundamental checking during the time of neutropenia can be accomplished.

Keywords : microbiology, infectious, neutropenia, epidemiology

Conference Title : ICCMID 2020 : International Conference on Clinical Microbiology and Infectious Diseases

Conference Location : Dubai, United Arab Emirates

Conference Dates : March 19-20, 2020
