

Synthesis, Characterization, Validation of Resistant Microbial Strains and Anti Microbial Activity of Substituted Pyrazoles

Authors : Rama Devi Kyatham, D. Ashok, K. S. K. Rao Patnaik, Raju Bathula

Abstract : We have shown the importance of pyrazoles as anti-microbial chemical entities. These compounds have generally been considered significant due to their wide range of pharmacological activities and their discovery motivates new avenues of research. The proposed pyrazoles were synthesized and evaluated for their anti-microbial activities. The synthesized compounds were analyzed by different spectroscopic methods.

Keywords : pyrazoles, validation, resistant microbial strains, anti-microbial activities

Conference Title : ICPYDAPA 2020 : International Conference on Pharmacy, Drug Action, Potency and Affinity

Conference Location : Toronto, Canada

Conference Dates : June 18-19, 2020
