

Methodologies, Systems Development Life Cycle and Modeling Languages in Agile Software Development

Authors : I. D. Arroyo

Abstract : This article seeks to integrate different concepts from contemporary software engineering with an agile development approach. We seek to clarify some definitions and uses, we make a difference between the Systems Development Life Cycle (SDLC) and the methodologies, we differentiate the types of frameworks such as methodological, philosophical and behavioral, standards and documentation. We define relationships based on the documentation of the development process through formal and ad hoc models, and we define the usefulness of using DevOps and Agile Modeling as integrative methodologies of principles and best practices.

Keywords : methodologies, modeling languages, agile modeling, UML

Conference Title : ICASDM 2020 : International Conference on Agile Software Development Methods

Conference Location : Vancouver, Canada

Conference Dates : September 23-24, 2020
