

Case Report and Discussion of Natural History of Bouveret Syndrome

Authors : Parul Garg

Abstract : Bouveret Syndrome is a rare presentation described as Gastric Outlet Obstruction secondary to Gallstone Ileus. Here we describe the 3-year progression of disease from cholelithiasis to gallstone ileus with relevant imaging findings. The patient was treated under an Upper Gastrointestinal Surgery service with surgical intervention in the form of a laparoscopic assisted procedure with midline laparotomy. She recovered well and was discharged 1 week post operatively. No complications occurred.

Keywords : Cholelithiasis, Bouveret syndrome, Gallstone Ileus, gastric outlet obstruction

Conference Title : ICGSLT 2020 : International Conference on Gastrointestinal Surgery and Liver Transplantation

Conference Location : Tokyo, Japan

Conference Dates : December 03-04, 2020
