

Detecting Covid-19 Fake News Using Deep Learning Technique

Authors : Anjali A. Prasad

Abstract : Nowadays, social media played an important role in spreading misinformation or fake news. This study analyzes the fake news related to the COVID-19 pandemic spread in social media. This paper aims at evaluating and comparing different approaches that are used to mitigate this issue, including popular deep learning approaches, such as CNN, RNN, LSTM, and BERT algorithm for classification. To evaluate models' performance, we used accuracy, precision, recall, and F1-score as the evaluation metrics. And finally, compare which algorithm shows better result among the four algorithms.

Keywords : BERT, CNN, LSTM, RNN

Conference Title : ICBDDLAIC 2023 : International Conference on Big Data, Deep Learning and Artificial Intelligence for Construction

Conference Location : Paris, France

Conference Dates : December 30-31, 2023
