

PhotoRoom App

Authors : Nouf Nasser, Nada Alotaibi, Jazzal Kandiel

Abstract : This research study is about the use of artificial intelligence in PhotoRoom. When an individual selects a photo, PhotoRoom automatically removes or separates the background from other parts of the photo through the use of artificial intelligence. This will allow an individual to select their desired background and edit it as they wish. The methodology used was an observation, where various reviews and parts of the app were observed. The review section's findings showed that many people actually like the app, and some even rated it five stars. The conclusion was that PhotoRoom is one of the best photo editing apps due to its speed and accuracy in removing backgrounds.

Keywords : removing background, app, artificial intelligence, machine learning
