

An Enhanced Support Vector Machine Based Approach for Sentiment Classification of Arabic Tweets of Different Dialects

Authors : Gehad S. Kaseb, Mona F. Ahmed

Abstract : Arabic Sentiment Analysis (SA) is one of the most common research fields with many open areas. Few studies apply SA to Arabic dialects. This paper proposes different pre-processing steps and a modified methodology to improve the accuracy using normal Support Vector Machine (SVM) classification. The paper works on two datasets, Arabic Sentiment Tweets Dataset (ASTD) and Extended Arabic Tweets Sentiment Dataset (Extended-AATSD), which are publicly available for academic use. The results show that the classification accuracy approaches 86%.

Keywords : Arabic, classification, sentiment analysis, tweets

Conference Title : ICBADM 2021 : International Conference on Business Analytics and Data Mining

Conference Location : Dubai, United Arab Emirates

Conference Dates : September 29-30, 2021
