## Dielectric Recovery Characteristics of High Voltage Gas Circuit Breakers Operating with CO<sub>2</sub> Mixture

Authors : Peng Lu, Branimir Radisavljevic, Martin Seeger, Daniel Over, Torsten Votteler, Bernardo Galletti

**Abstract :**  $CO_2$ -based gas mixtures exhibit huge potential as the interruption medium for replacing SF<sub>6</sub> in high voltage switchgears. In this paper, the recovery characteristics of dielectric strength of  $CO_2$ - $O_2$  mixture in the post arc phase after the current zero are presented. As representative examples, the dielectric recovery curves under conditions of different gas filling pressures and short-circuit current amplitudes are presented. A series of dielectric recovery measurements suggests that the dielectric recovery rate is proportional to the mass flux of the blowing gas, and the dielectric strength recovers faster in the case of lower short circuit currents.

Keywords : CO<sub>2</sub> mixture, high voltage circuit breakers, dielectric recovery rate, short-circuit current, mass flux

Conference Title : ICHVE 2021 : International Conference on High Voltage Engineering

Conference Location : London, United Kingdom

Conference Dates : November 18-19, 2021
