

Technological Advancement of Socratic Supported by Artificial Intelligence

Authors : Amad Nasseef, Layan Zugail, Joud Musalli, Layan Shaikan

Abstract : Technology has become an essential part of our lives. We have also witnessed the significant emergence of artificial intelligence in so many areas. Throughout this research paper, the following will be discussed: an introduction on AI and Socratic application, we also did an overview on the application's background and other similar applications, as for the methodology, we conducted a survey to collect results on users experience in using the Socratic application. The results of the survey strongly supported the usefulness and interest of users in the Socratic application. Finally, we concluded that Socratic is a meaningful tool for learning purposes due to it being supported by artificial intelligence, which made the application easy to use and familiar to users to deal with through a click of a button.

Keywords : Socratic, artificial intelligence, application, features

Conference Title : ICSCAI 2021 : International Conference on Software Computing and Artificial Intelligence Applications

Conference Location : Barcelona, Spain

Conference Dates : October 25-26, 2021
