Together - A Decentralized Application Connects Ideas and Investors

Authors : Chandragiri Nagadeep, M. V. V. S. Durga, Sadu Mahikshith

Abstract : Future generation is depended on new ideas and innovations that develops the country economical growth and technology standards so, Startups plays an important role in satisfying above goals. Startups includes support which is given by investing into it by investors but, single digit investors can't keep supporting one startup and lot of security problems occurs while transferring large funds to startup's bank account. Targeting security and most supportive funding, TogEther solves these issues by providing a platform where "Crowd Funding" is available in a decentralized way such that funding is done with digital currency called cryptocurrency where transactions are done in a secured way using "Block Chain Technology". Not only Funding but also Ideas along with their documents can be presented and hosted with help of IPFS (Inter Planetary File System).

Keywords : blockchain, ethereum, web3, reactjs, interplanetary file system, funding
Conference Title : ICBBSC 2021 : International Conference on Blockchain-Based Systems and Cryptocurrency
Conference Location : Rome, Italy
Conference Dates : August 23-24, 2021
