

Programmed Speech to Text Summarization Using Graph-Based Algorithm

Authors : Hamsini Pulugurtha, P. V. S. L. Jagadamba

Abstract : Programmed Speech to Text and Text Summarization Using Graph-based Algorithms can be utilized in gatherings to get the short depiction of the gathering for future reference. This gives signature check utilizing Siamese neural organization to confirm the personality of the client and convert the client gave sound record which is in English into English text utilizing the discourse acknowledgment bundle given in python. At times just the outline of the gathering is required, the answer for this text rundown. Thus, the record is then summed up utilizing the regular language preparing approaches, for example, solo extractive text outline calculations

Keywords : Siamese neural network, English speech, English text, natural language processing, unsupervised extractive text summarization

Conference Title : ICSTCTNP 2022 : International Conference on Systems Thinking, Cybernetic Technology and New Perspectives

Conference Location : San Francisco, United States

Conference Dates : June 02-03, 2022
