

Developing Research Involving Different Species: Opportunities and Empirical Foundations

Authors : A. V. Varfolomeeva, N. S. Tkachenko, A. G. Tishchenko

Abstract : The problem of violation of internal validity in studies of psychological structures is considered. The role of epistemological attitudes of researchers in the planning of research within the methodology of the system-evolutionary approach is assessed. Alternative programs of psychological research involving representatives of different biological species are presented. On the example of the results of two research series the variants of solving the problem are discussed.

Keywords : epistemological attitudes, experimental design, validity, psychological structure, learning
