

## Reforms in China's Vaccine Administration: Vulnerabilities, Legislative Progresses and the Systemic View of Vaccine Administration Law

**Authors :** Lin Tang, Xiaoxia Guo, Lingling Zhang

**Abstract :** Recent vaccine scandals overshadowed China's accomplishment of public health, triggering discussions on the causes of vaccine incidents. Through legal interpretation of selected vaccine incidents and analysis of systemic vulnerabilities in vaccine circulation and lot release, a panoramic review of legislative progresses in the vaccine administration sheds the light on this debate. In essence, it is the combination of the lagging legal system and the absence of information technology infrastructure in the process of vaccine administration reform that has led to the recurrence of vaccine incidents. These findings have significant implications for further improvement of vaccine administration and China's participation in global healthcare.
