## **UEMSD Risk Identification: Case Study**

Authors: K. Sekulová, M. Šimon

**Abstract :** The article demonstrates on a case study how it is possible to identify MSD risk. It is based on a dissertation risk identification model of occupational diseases formation in relation to the work activity that determines what risk can endanger workers who are exposed to the specific risk factors. It is evaluated based on statistical calculations. These risk factors are main cause of upper-extremities musculoskeletal disorders.

Keywords: case study, upper-extremity musculoskeletal disorders, ergonomics, risk identification

Conference Title: ICOMIE 2014: International Conference on Operations Management and Industrial Engineering

**Conference Location :** Paris, France **Conference Dates :** October 30-31, 2014
