

A Theoretical and Corpus-Based Analysis of English and Spanish Syntax Derived from Método de Los Relojos Verb Types According to Systemic- Functional Grammar as a Foundation for Methodological Adaption

Authors : Timothy William Lawrence

Abstract : The goal of this paper is to research and categorize the four basic verb types found in the Spanish descriptive grammar book Método de los Relojos using verb clauses as representation as found in M.A.K. Halliday's Systemic-Functional Grammar with the purpose of establishing theoretical along with syntactical parallels and deviations between English and Spanish. Results confirm theoretical correlations exist therefore leading to an analysis of English grammar syntax resulting in delineating commonalities and differences from Spanish. Corpora searches were carried out on different patterns of syntactical structures confirming divergences in verb syntax, making it possible to establish parameters to adapt English verbs to the criteria of the four basic Método de los Relojos verb types.

Keywords : corpus studies, Método de los Relojos, structural-functional grammar, verb syntax
