

The Value of Traditional Ecological Knowledge in a Globalised World: A Case Study from the Peruvian Amazon

Authors : Anna Juliet Stephens

Abstract : This research emphasises the importance of incorporating traditional ecological knowledge into Peru's development plans, as a way to manage some of the more adverse impacts of globalisation which continue to impinge on one of the world's most biodiverse regions. In doing so, it argues for a development strategy to be implemented in the Peruvian Amazon which prioritises local and indigenous rights, needs and perspectives.

Keywords : traditional ecological knowledge, peruvian amazon, globalisation, indigenous, development
