

The Power of Geography in the Multipolar World Order

Authors : Norbert Csizmadia

Abstract : The paper is based on a thorough investigation regarding the recent global, social and geographical processes. The 'Geofusion' book series by the author guides the readers with the help of newly illustrated "associative" geographic maps of the global world in the 21st century through the quest for the winning nations, communities, leaders and powers of this age. Hence, the above mentioned represent the research objectives, the preliminary findings of which are presented in this paper. The most significant recognition is that scientists who are recognized as explorers, geostrategists of this century, in this case, are expected to present guidelines for our new world full of global social and economic challenges. To do so, new maps are needed which do not miss the wisdom and tools of the old but complement them with the new structure of knowledge. Using the lately discovered geographic and economic interrelations, the study behind this presentation tries to give a prognosis of the global processes. The methodology applied contains the survey and analysis of many recent publications worldwide regarding geostrategic, cultural, geographical, social, and economic surveys structured into global networks. In conclusion, the author presents the result of the study, which is a collage of the global map of the 21st century as mentioned above, and it can be considered as a potential contribution to the recent scientific literature on the topic. In summary, this paper displays the results of several-year-long research giving the audience an image of how economic navigation tools can help investors, politicians and travelers to get along in the changing new world.

Keywords : geography, economic geography, geo-fusion, geostrategy

Conference Title : ICEGEG 2022 : International Conference on Economic Globalization and Economic Geography

Conference Location : Paris, France

Conference Dates : March 28-29, 2022
