

Eco-Entrepreneurship Education in India: Exploring Online Course Structure

Authors : Vishwas Chakranarayan, Mariyam Al Salman

Abstract : Despite the global environmental threats, previous approaches used to overcome these problems have failed to prevent environmental degradation. Scholars believe that entrepreneurs can help conserve habitats, combat climate change, increase freshwater availability, sustain biodiversity, and reduce environmental degradation and deforestation. The pandemic is creating a different ecosystem for fostering the eco-entrepreneurship opportunities. However, attending a course physically is a challenge for many willing learners. Therefore, it is an opportune time to contemplate on developing a social entrepreneurship curriculum which can be offered online.

Keywords : ecopreneurship, environmental problems, environmental degradation, entrepreneurship education
