

Making Sense of Adversity Triggers Using Organisational Resilience, a Systematic Literature Review

Authors : Luke McGowan, David Pickernell, Martini Battisti

Abstract : In this paper, Adversity Triggers were explored through the lens of Organisational Resilience. Adversity Triggers are contextualized by temporal factors, thus, naturally aligning to Resilience literature. Resilience has been chosen as the theoretical framework as risk management approaches are often not geared towards providing meaningful responses to high-impact, low-probability events. Adversity Triggers and Organisational Resilience both consider temporal factors which enabled investigation of each phase of recovery. A systematic literature was employed to assess previous literature and define further areas of research. The systematic literature review method was chosen to catalogue and identify gaps in current literature.

Keywords : adversity triggers, crisis, extreme events, organisational resilience, resilience

Conference Title : ICIMM 2022 : International Conference on Industrial Marketing Management

Conference Location : Lisbon, Portugal

Conference Dates : April 14-15, 2022
