

A Survey of Novel Opportunistic Routing Protocols in Mobile Ad Hoc Networks

Authors : R. Poonkuzhali, M. Y. Sanavullah, M. R. Gurupriya

Abstract : Opportunistic routing is used, where the network has the features like dynamic topology changes and intermittent network connectivity. In Delay Tolerant network or Disruption tolerant network opportunistic forwarding technique is widely used. The key idea of opportunistic routing is selecting forwarding nodes to forward data and coordination among these nodes to avoid duplicate transmissions. This paper gives the analysis of pros and cons of various opportunistic routing techniques used in MANET.

Keywords : ETX, opportunistic routing, PSR, throughput

Conference Title : ICSRD 2020 : International Conference on Scientific Research and Development

Conference Location : Chicago, United States

Conference Dates : December 12-13, 2020
