

A Study on Big Data Analytics, Applications, and Challenges

Authors : Chhavi Rana

Abstract : The aim of the paper is to highlight the existing development in the field of big data analytics. Applications like bioinformatics, smart infrastructure projects, healthcare, and business intelligence contain voluminous and incremental data which is hard to organise and analyse and can be dealt with using the framework and model in this field of study. An organisation decision-making strategy can be enhanced by using big data analytics and applying different machine learning techniques and statistical tools to such complex data sets that will consequently make better things for society. This paper reviews the current state of the art in this field of study as well as different application domains of big data analytics. It also elaborates various frameworks in the process of analysis using different machine learning techniques. Finally, the paper concludes by stating different challenges and issues raised in existing research.

Keywords : big data, big data analytics, machine learning, review

Conference Title : ICAIMS 2022 : International Conference on Artificial Intelligence and Management Systems

Conference Location : Auckland, New Zealand

Conference Dates : December 02-03, 2022
