

Cybersecurity Awareness Among Applied Sciences Student Population

Authors : Sanja Bracun, Nikolina Kasunic

Abstract : After graduation, the student population of applied sciences will become the population of employees on IT experts' positions or "just" business users of certain IT technologies for which the level of awareness of existing cybersecurity risks is extremely important. This research results define the current cybersecurity awareness level of students at Zagreb University of Applied Sciences (TVZ), what can be useful not only for teaching staff to form a curriculum related to cybersecurity more accurately but also to employers to know what to expect from their future employees regarding cybersecurity awareness level.

Keywords : student population cybersecurity awareness, cybersecurity awareness, cybersecurity, applied sciences students
