

Building Bridges on Roads With Major Constructions

Authors : Mohamed Zaidour

Abstract : In this summary, we are going to look in brief at the bridges and their building and construction on most roads and we have followed a simple method to explain each field clearly because the geographical and climatic diversity of an area leads to different methods and types of roads and installation engineering in other areas. In mountain areas we need to build retaining walls in areas of rain. It needs to construct ferries to discharge water from roads in areas of temporary or permanent rivers. There is a need to build bridges and construct road installations in the process of collecting the necessary information, such as soil type. This information needs it, engineer, when designing the constructor and in this section, we will identify the types and methods of calculation bridge columns rules phrases the walls are chock.

Keywords : bridges, buildings, concrete, constructions, roads

Conference Title : ICSTBT 2022 : International Conference on Structure of Tall Buildings and Towers

Conference Location : Toronto, Canada

Conference Dates : September 20-21, 2022
