

Analysis of Pangasinan State University: Bayambang Students' Concerns Through Social Media Analytics and Latent Dirichlet Allocation Topic Modelling Approach

Authors : Matthew John F. Sino Cruz, Sarah Jane M. Ferrer, Janice C. Francisco

Abstract : COVID-19 pandemic has affected more than 114 countries all over the world since it was considered a global health concern in 2020. Different sectors, including education, have shifted to remote/distant setups to follow the guidelines set to prevent the spread of the disease. One of the higher education institutes which shifted to remote setup is the Pangasinan State University (PSU). In order to continue providing quality instructions to the students, PSU designed Flexible Learning Model to still provide services to its stakeholders amidst the pandemic. The model covers the redesigning of delivering instructions in remote setup and the technology needed to support these adjustments. The primary goal of this study is to determine the insights of the PSU - Bayambang students towards the remote setup implemented during the pandemic and how they perceived the initiatives employed in relation to their experiences in flexible learning. In this study, the topic modelling approach was implemented using Latent Dirichlet Allocation. The dataset used in the study. The results show that the most common concern of the students includes time and resource management, poor internet connection issues, and difficulty coping with the flexible learning modality. Furthermore, the findings of the study can be used as one of the bases for the administration to review and improve the policies and initiatives implemented during the pandemic in relation to remote service delivery. In addition, further studies can be conducted to determine the overall sentiment of the other stakeholders in the policies implemented at the University.

Keywords : COVID-19, topic modelling, students' sentiment, flexible learning, Latent Dirichlet allocation

Conference Title : ICNLP 2022 : International Conference on Natural Language Processing

Conference Location : Istanbul, Türkiye

Conference Dates : December 20-21, 2022
