

Serious Digital Video Game for Solving Algebraic Equations

Authors : Liliana O. Martínez, Juan E González, Manuel Ramírez-Aranda, Ana Cervantes-Herrera

Abstract : A serious game category mobile application called Math Dominoes is presented. The main objective of this applications is to strengthen the teaching-learning process of solving algebraic equations and is based on the board game "Double 6" dominoes. Math Dominoes allows the practice of solving first, second-, and third-degree algebraic equations. This application is aimed to students who seek to strengthen their skills in solving algebraic equations in a dynamic, interactive, and fun way, to reduce the risk of failure in subsequent courses that require mastery of this algebraic tool.

Keywords : algebra, equations, dominoes, serious games

Conference Title : ICSME 2023 : International Conference on Science and Mathematics Education

Conference Location : Barcelona, Spain

Conference Dates : August 10-11, 2023
