

Emotions in Human-Machine Interaction

Authors : Joanna Maj

Abstract : Awe inspiring is the idea that emotions could be present in human-machine interactions, both on the human side as well as the machine side. Human factors present intriguing components and are examined in detail while discussing this controversial topic. Mood, attention, memory, performance, assessment, causes of emotion, and neurological responses are analyzed as components of the interaction. Problems in computer-based technology, revenge of the system on its users and design, and applications comprise a major part of all descriptions and examples throughout this paper. It also allows for critical thinking while challenging intriguing questions regarding future directions in research, dealing with emotion in human-machine interactions.

Keywords : biocomputing, biomedical engineering, emotions, human-machine interaction, interfaces

Conference Title : ICABB 2022 : International Conference on Advanced Biotechnology and Biomechanics

Conference Location : Jerusalem, Israel

Conference Dates : November 29-30, 2022
