

Criss-Crossing the Sahara: New Dangers to the Ambitions of West African Migrants

Authors : Olusegun Paul Adesanya, Oluwatolamide Olominu, Olusegun Idowu

Abstract : This study investigates new dangers that West African migrants travelling through the Sahara Desert to Europe contend with. COVID-19 has left an unprecedented impact on all aspects of global politics, migration inclusive. In turn, limitations to migration have drastically increased, especially the stricter visa application measures set by European countries. This intensified attempts at crisscrossing the desert to Europe. In turn, several migrants used the Sahara as the highway to Europe. While some persons successfully travelled through the desert-scape, several others were unsuccessful. Notwithstanding the negative experiences of previous migrants, several other nationals across the region have plans to travel through the desert to Europe. As such, this study employs a mixed method of research reliant on qualitative and quantitative methods of data gathering and analysis. The study holds that there are new dangers to the aspirations of West Africans travelling to Europe through the Sahara and the Mediterranean Sea.

Keywords : migrants, Sahara Desert, West Africa, crisscrossing, dangers, irregular migration

Conference Title : ICASMMHR 2022 : International Conference on Administrative Science, Migration, Mobility and Human Rights

Conference Location : Paris, France

Conference Dates : November 14-15, 2022
