

Implementation of a Baseline RISC for the Realization of a Dynamically Reconfigurable Processor

Authors : Hajer Najjar, Riad Bourguiba, Jaouhar Mouine

Abstract : Reduced instruction set computer (RISC) processors are widely used because of their multiple advantages. In fact, they are based on a simple instruction set so that they increase the speed of the processor and reduce its energy consumption. In this paper, we will present a basic RISC architecture processor that will be developed later to converge to a new architecture with runtime reconfiguration.

Keywords : processor, RISC, DLX, pipeline, runtime reconfiguration

Conference Title : ICSRD 2020 : International Conference on Scientific Research and Development

Conference Location : Chicago, United States

Conference Dates : December 12-13, 2020
