

Data Science Inquiry to Manage Football Referees' Careers

Authors : Iñaki Aliende, Tom Webb, Lorenzo Escot

Abstract : There is a concern about the decrease in football referees globally. A study in Spain has analyzed the factors affecting a referee's career over the past 30 years through a survey of 758 referees. Results showed the impact of factors such as threats, education, initial vocation, and dependents on a referee's career. To improve the situation, the federation needs to provide better information, support young referees, monitor referees, and raise public awareness of violence toward referees. The study also formed a comprehensive model for federations to enhance their officiating policies by means of data-driven techniques that can serve other federations to improve referees' careers.

Keywords : data science, football referees, sport management, sport careers, survival analysis

Conference Title : ICSADS 2023 : International Conference on Sports Analytics and Data Science

Conference Location : New York, United States

Conference Dates : August 10-11, 2023
