

Nature-Based Solutions: An Intelligent Method to Enhance Urban Resilience in Response to Climate Change

Authors : Mario Calabrese, Francesca Iandolo, Pietro Vito, Raffaele D'Amore, Francesco Caputo

Abstract : This article presents a synopsis of Nature-Based Solutions (NBS), a fresh and emerging concept in mitigating and adapting to climate change. It outlines a classification of NBS, from the least intrusive to the most advanced engineering, and provides illustrations of each. Moreover, it gives an overview of the 'Life Metro Adapt' initiative, which dealt with the climatic challenges faced by the Milan Metropolitan City and encouraged the development of climate change adaptation methods using alternative, nature-focused solutions. Lastly, the article emphasizes the necessity of raising awareness about environmental issues to ensure that NBS becomes a regular practice today and can be refined in the future.

Keywords : nature-based solutions, urban resilience, climate change adaptation, life metro adapt initiative

Conference Title : ICEUNBS 2023 : International Conference on Eco-Urbanism and Nature-Based Solutions

Conference Location : Istanbul, Türkiye

Conference Dates : August 17-18, 2023
