

Practice of Applying MIDI Technology to Train Creative Teaching Skills

Authors : Yang Zhuo

Abstract : This study explores the integration of MIDI technology as one of the important digital technologies in music teaching, from the perspective of teaching practice, into the process of cultivating students' teaching skills. At the same time, the framework elements of the learning environment for music education students are divided into four aspects: digital technology supported learning space, new knowledge learning, teaching methods, and teaching evaluation. In teaching activities, more attention should be paid to students' subjectivity and interaction between them so as to enhance their emotional experience in teaching practice simulation. In the process of independent exploration and cooperative interaction, problems should be discovered and solved, and basic knowledge of music and teaching methods should be exercised in practice.

Keywords : music education, educational technology, MIDI, teacher training

Conference Title : ICMST 2023 : International Conference on Music and Sound Technology

Conference Location : Barcelona, Spain

Conference Dates : June 19-20, 2023
