Early Talent Identification and Its Impact on Children's Growth and Development: An Examination of "The Social Learning Theory, by Albert Bandura"

Authors : Michael Subbey, Kwame Takyi Danquah
Abstract : Finding a child's exceptional skills and abilities at a young age and nurturing them is a challenging process. The Social Learning Theory (SLT) of Albert Bandura is used to analyze the effects of early talent identification on children's growth and development. The study examines both the advantages and disadvantages of early talent identification and stresses the significance of a moral strategy that puts the welfare of the child first. The paper emphasizes the value of a balanced approach to early talent identification that takes into account individual differences, cultural considerations, and the child's social environment.
