

Revitalising Warsaw: The Significance of Incorporating 18th Century Art in Post-War Architecture Reconstruction

Authors : Aleksandra Kondraciuk

Abstract : The reconstruction of post-war architecture in Warsaw is an important and complex project that requires physical restoration and cultural preservation. The incorporation of 18th-century art within the renovated structures of the urban area forms a crucial aspect of the reconstruction procedure. Information was gathered by interviewing current residents, examining additional data, and researching archival materials. This form of art was once a thriving cultural centre in Warsaw, playing a significant role in its history. Adding it to the rebuilt structures links them to the city's vibrant past, making them more meaningful for locals and visitors. The reconstructed buildings showcase 18th-century art forms, including sketches, drawings, and paintings, accurately replicating the original buildings' architectural details and decorative elements. These art forms elevate the buildings from mere functional spaces to works of art themselves, thus augmenting the beauty and distinctiveness of the city, setting it apart from other cities worldwide. Furthermore, this art form symbolises the city's tenacity in adversity and destruction. Revitalising Warsaw requires rebuilding its physical structures, restoring its cultural identity, and preserving its rich history. Incorporating 18th-century art into the post-war architectural reconstruction process is a powerful way to achieve these goals and maintain the city. This approach acknowledges the city's history and cultural significance, fostering a sense of continuity between the past and present, which is crucial for the city's future growth and prosperity.

Keywords : 18th-century art, building reconstruction, cultural preservation, post-war architecture

Conference Title : ICA 2023 : International Conference on Architecture

Conference Location : Sydney, Australia

Conference Dates : August 24-25, 2023
