

Resilient Strategic Approach Towards Environmental Pollution and Infrastructural Misappropriation in Niger Delta Region: A Bibliometric Analysis

Authors : Anyia Nduka, Aslan Bin Amad Senin

Abstract : Environmental degradation and infrastructure abuse in the Niger Delta have received increasing attention over the last two decades in several sectors, like strategic management, societal impacts, etc. Resilience strategy in human capital development and technology has inspired the formulation and implementation of strategies, policies, or activities to mitigate risks while taking advantage of opportunities to respond to crisis management. This research hopes to add to the debate on the resilient strategic model in the Niger Delta region, which is plagued with environmental and infrastructure mismanagement. It further proposes a conceptual framework of robust strategy and open technology model on bibliometric analysis. This article is intended to be a starting point for an in-depth discussion of the factors that lead to these mismanagements. Four factors were discovered for a resilient strategy leading to a more efficient and effective management procedure.

Keywords : resilience strategy, infrastructural mismanagement, human capital development., strategic management
