Conceptualization and Strategies of Biogas Technology for Rural Development in Nigeria

Authors: Okorowo Cyril Agochi

Abstract : The main challenge of present world is to harness the energy source which is environment friendly and ecologically balanced. This need has forced to search for other alternate source of energy. But unfortunately the new alternative energy sources like the solar, hydro, wind etc. require huge economical value and technical power to operate, which seem to be very difficult for the developing countries like Nigeria. In the present moment biogas energy can be one and only reliable, easily available and economically feasible source of alternative and renewable source which can be managed by locally available sources and simple technology for secondary schools, tertiary institution and rural villages. This paper is aimed at boosting the energy generation for developing of rural Nigeria, through Biogas.

Keywords: bio-gas, energy, environment, nigeria, technology

Conference Title: ICETE 2016: International Conference on Environmental Technology and Engineering

Conference Location : Seattle, United States Conference Dates : August 08-09, 2016
