

Empath vs Narcissist Among University Sports Persons

Authors : Jaskarn Singh Sidhu

Abstract : The present study investigated the relationship of Empathy and Narcissism among university sports persons. Sample-The sample of the study consists of a total of 248 sportspersons and non-sports persons. Tools- To evaluate empathy, a 16-scale questionnaire was used and to evaluate narcissism, NPI-16 questionnaire was used. Statically-Two-Way Analysis of Variance used to analyse the data collected to establish the relationship. Results- In empathy male champion players shows more empathy than female counterparts the results also reveals that non champion females showed more empathy than non-champion male sports persons. In totality champion shows more empathy than non- champions. Results of Narcissism revealed that male champion sports persons were high on Narcissism scale then female counterparts. Non -champion males also indicate high narcissism then non champion female sports persons indicating female were less self -oriented then male sports persons. Conclusion- From the results it was concluded that no significant difference exists among sports persons in empathy and narcissism with reference to gender and sports performance.

Keywords : champion, narcissism, empathy, non champion players
