

A New Approach to Image Stitching of Radiographic Images

Authors : Somaya Adwan, Rasha Majed, Lamya'a Majed, Hamzah Arof

Abstract : In order to produce images with whole body parts, X-ray of different portions of the body parts is assembled using image stitching methods. A new method for image stitching that exploits mutually feature based method and direct based method to identify and merge pairs of X-ray medical images is presented in this paper. The performance of the proposed method based on this hybrid approach is investigated in this paper. The ability of the proposed method to stitch and merge the overlapping pairs of images is demonstrated. Our proposed method display comparable if not superior performance to other feature based methods that are mentioned in the literature on the standard databases. These results are promising and demonstrate the potential of the proposed method for further development to tackle more advanced stitching problems.

Keywords : image stitching, direct based method, panoramic image, X-ray

Conference Title : ICBMMA 2015 : International Conference on Bioinformatics Models, Methods and Algorithms

Conference Location : Jeddah, Saudi Arabia

Conference Dates : January 26-27, 2015
