

## From Aid to Autonomy: Rethinking Agriculture and Self-Sufficiency in Developing Nations

**Authors :** Basse Igri Okon, Gloria Mayen Umukoro

**Abstract :** The United Nations faces the formidable challenge of ensuring sustainable food provision for the world's burgeoning population, as outlined in Sustainable Development Goals 1 and 2. Predominantly, underdeveloped nations bear the brunt of hunger and poverty, lacking sustainable means of self-sustenance. A critical factor contributing to this dire situation is the underperformance of their agricultural sectors, ostensibly necessitating intervention from developed nations. This paper posits that the provision of Agricultural Aid has become a modern instrument of colonization. It unveils how developed countries, under the pretext of aid, perpetuate a neo-colonial dominance over underdeveloped nations. It is argued that unless these nations revert to indigenous farming methodologies and implement effective governance to enable sustainable agriculture, they are likely to remain entrapped in a relentless cycle of hunger, poverty, and economic subservience.
