

Study of the Behavior and Similarities of Flow and Level Transmitters in the Industries

Authors : Valentina Alessandra Carvalho do Vale, Elmo Thiago Lins Cöuras Ford

Abstract : In view of the requirements of the current industrial processes, the instrumentation plays a critical role. In this context, this work aims to raise some the operating characteristics of the level and flow transmitters, in addition to observing their similarities and possible limitations for certain configurations.

Keywords : flow, level, instrumentation, configurations of meters, method of choice of the meters, instrumentation in the industrial processes

Conference Title : ICPE 2014 : International Conference on Precision Engineering

Conference Location : Penang, Malaysia

Conference Dates : December 04-05, 2014
