

Methodological Analysis and Exploration of Feminist Planning Research in the Field of Urban and Rural Planning

Authors : Xi Zuo

Abstract : As a part of the urban population that cannot be ignored, women have long been less involved in urban planning due to socio-economic constraints. Urban planning and development have long been influenced by the mainstream "male standard", paying less attention to women's needs for space in the city. However, with the development of the economy and society and the improvement of women's social status, their participation in urban life is gradually increasing, and their needs for the city are diversifying. Therefore, different scholars, planning designers and governmental departments have explored this field in different degrees and directions. This paper summarizes the research on urban planning from women's perspectives, discusses its strengths, weaknesses, and methodology with specific case studies, and then further discusses the direction of further research on this topic.

Keywords : urban planning, feminist, methodology, gender

Conference Title : ICSUDSP 2024 : International Conference on Sustainable Urban Development and Spatial Planning

Conference Location : Rome, Italy

Conference Dates : July 22-23, 2024
