

Optimization of Catalyst Parameters to Get Chlorine Free Bimetallic Catalysts

Authors : Noreen Sajjad Ghulam Hussain

Abstract : Catalysts are prepared by simple physical mixing and thermal treatment of support and metal acetate precursors. The effect of metal ratio and metal loading to produce highly active catalyst for the oxidation of benzyl alcohol are studied.

Keywords : catalyst, acetates, benzyl alcohols

Conference Title : ICC 2014 : International Conference on Chemistry

Conference Location : Istanbul, Türkiye

Conference Dates : December 05-06, 2014
