

Design and Development of Bar Graph Visualization in 2D and 3D Space Using Front-End Technologies

Authors : Sourabh Yaduvanshi, Varsha Namdeo, Namrata Yaduvanshi

Abstract : This study delves into the design and development intricacies of crafting detailed 2D bar charts via d3.js, recognizing its limitations in generating 3D visuals within the Document Object Model (DOM). The study combines three.js with d3.js, facilitating a smooth evolution from 2D to immersive 3D representations. This fusion epitomizes the synergy between front-end technologies, expanding horizons in data visualization. Beyond technical expertise, it symbolizes a creative convergence, pushing boundaries in visual representation. The abstract illuminates methodologies, unraveling the intricate integration of this fusion and guiding enthusiasts. It narrates a compelling story of transcending 2D constraints, propelling data visualization into captivating three-dimensional realms, and igniting creativity in front-end visualization endeavors.

Keywords : design, development, front-end technologies, visualization

Conference Title : ICVIIP 2024 : International Conference on Visualization, Imaging and Image Processing

Conference Location : Lagos, Nigeria

Conference Dates : August 08-09, 2024
