

Sustainability of Offshore Petroleum Resources Extraction and Management of Bangladesh: International and Regional Frameworks

Authors : Muhammad Farhad Hosen

Abstract : This article examines the sustainability of offshore petroleum resource extraction and management in Bangladesh, focusing on international and regional frameworks. The analysis includes international conventions such as UNCLOS, IMO regulations, and SDGs, as well as regional cooperation through organizations like BIMSTEC and SAARC. The objective is to highlight the impact of these frameworks on sustainable extraction practices, address challenges, and offer recommendations for enhancing Bangladesh's legal and regulatory approaches to offshore resource management. The article underscores the need for harmonizing national laws with international standards, enhancing enforcement mechanisms, and promoting regional cooperation to ensure sustainable development.

Keywords : Bangladesh, international frameworks, offshore petroleum, regional framework, sustainability
